

MEASURING YOUR TUBA

To custom fit a Superfine bag to your tuba, we need you to carefully measure the horn and provide a photo of it. Please fill in the 5 measurements below. A cloth tailor's tape is easiest, but you can use a metal tape measure or take measurements with a piece of string and measure the string (to avoid scratching the tuba). When I measure a tuba, I usually put it bell-down on the floor or on a table. If you are not sure you are doing it correctly, feel free to call or email us.

Your name:

Tuba make & model:

- _____ (A to B) Bell diameter
_____ (C to B) Tuba height
_____ (C to D) Upper bow height
_____ (E to F) Width of horn at the the horn's "shoulder" (F) ignoring the leadpipe/receiver
_____ GIRTH (Measure around the tuba body at its largest point. Include front action valves. Ignore the leadpipe/receiver)

Please return the completed form any way possible. You can attach/text a photo or scan, or just email me the information.
